

NONWOVEN Materials

Nonwoven 600 (NW 600) – Under Cast Padding

Typical Properties

NW 600 orthopedic under cast padding - an air-laid, needled nonwoven fabric made from 100% 6 denier, 1.5 inch long polyester fibers. It is uniform in appearance, clean, and free from foreign materials. It is typically supplied to cut widths in coreless rolls.

Roll Dimensions

Length: 12 feet
Width: "typical" – 2, 3, 4, 5 or 6 inches
Diameter: 2.5 inches

Basis Weight

8.5 gr/sq ft

Tensile Strength

1.75 lbs/3 inch width

Packaging

Rolls: neatly rolled with clean-cut edges and free from dirt or foreign matter. Bags must be heat sealed, tabbed, or folded and taped uniformly. Bags can be high or low-density plastic or paper. No torn, open, wet or water-stained packaging is allowed.
