March 2008

### PORON® Soft Seal Urethane Foams Require Low-Tack Adhesive Cover Liner in Assembly

PORON® Soft Seal Urethanes are typically used as display gaskets within handheld electronics to provide dust sealing, water-proofing, shock absorption and gap filling. There is a trend in the industry to apply removable adhesive cover liners to protect and maintain cleanliness of these gaskets during transportation. The cover liner remains with the gasket through the assembly process, at which time the liner is removed.

The proprietary low-density formulation which enhances the compressibility of PORON Soft Seal Urethanes also makes the foam delicate - thereby requiring careful selection of removable adhesive cover liners. Without using the appropriate removable adhesive cover liner, the foam may tear when the liner is removed.

Our General Adhesive Applications Guide contains recommended adhesives for use with PORON Urethane foams. The table below contains suggestions for use with PORON Soft Seal foams. All liners should be removed from PORON Soft Seal within three weeks of application. For further technical information about a specific removable adhesive cover liner, please contact the manufacturer directly to help determine which product will be most suitable for your application.
